

Parts of a Computer

SHS 1 ICT · Module 2 — Computer Hardware

The four parts of a computer system

- **Input** — getting data in
- **Processing** — the CPU works on the data
- **Storage** — keeping data for later
- **Output** — showing the results

Input devices

- Keyboard and mouse
- Scanner and webcam
- Microphone
- Touch screen (input *and* output)

Output devices

- Monitor and projector
- Printer
- Speakers and headphones

Memory: RAM vs ROM

	RAM	ROM
Stands for	Random Access Memory	Read Only Memory
Keeps data when off?	No (volatile)	Yes
Used for	Programs in use now	Start-up instructions

Check your understanding

- Name two input devices you used today
- Why is RAM called volatile?
- Which part of the computer does the processing?
